GAS FILTER CAPACITY TO EN 14387:2004

PARTICLE FILTER CAPACITY TO EN 143

Class	Capacity	MAX PERMITTED PENETRATION	
		NaCl (solid, dusts)	Parrafin Oil (liquid particles, aerosols)
P1	Low capacity (against harmful solid particles)	20%	20%
P2	Medium capacity (against solid and liquid hazardous particles)	6%	6%
P3	High capacity (against solid and liquid toxic particles)	0,05%	0,05%

NOTE! The filtering device may be used only if the oxygen content of the air is 18 - 23 vol.%. The substances in the air must be identified and measured. Airborne contamination levels must be compared with acceptable limits. The maximum exposure limits must not be

exceeded! The filtering device must not be used if the environment and contamination are unknown or if the composition of the atmosphere is likely to change disadvantageously. In case of doubt, insulating respirators, which function independently from the

atmosphere, must be used. Gas filters do not protect against particles and particle filters do not provide protection against gases or vapours. In case of doubt, use combined filters.
